Summary of Qualifications

- Over 3 years of experience in Data Analysis and Business Management at a major financial firm
 - A high performing individual in data reporting and analytics space, with great success in helping clients derive meaning from their data by providing actionable recommendations and data driven insights
 - Currently leading the IT workforce analytics and reporting initiative. Overseeing development of a single BI platform capable of producing visually compelling reports to more than 100 downstream consumers including senior management
-

Employment

Project - Workforce Strategy

July 2015 - Present

Data Analyst, Credit Suisse - New York, NY

- Spearheaded development of an end-end reporting platform. The Business Intelligence (BI) platform is built on Tableau Software and is completely automated. It provides IT wide standard reporting, overhauls the dependency on excel, improves efficiency and significantly reduces manual workload
- Interacted with multiple clients across different functions, gathered requirements, finalized on key metrics for tracking and built a robust and novel design, which caters to all the requirements. These dashboards are now used by more than 100 people within the firm
- Subject matter expert for Tableau reporting. Responsible for managing client expectations, building customized reports, setting up access permissions on 'Tableau Server'. These reports help senior management drive major strategic initiatives like seat capacity planning, senior leadership footprint, target state tracking and financial benefit analysis

Project - Model Risk Management

June 2013- June 15

Business/Data Analyst, Credit Suisse - New York, NY

- Lead business analyst overseeing implementation of firm wide risk system being built from scratch. Primarily responsible for interacting with business users to gather requirements, designing mock interfaces and consulting with lead developer and project manager regularly to ensure successful release cycles
- Significantly reduced the downtime of gathering requirements by building interactive mock-ups in Balsamiq and FramerJS. The initiative was a huge success within team and among end-users
- Self initiated development of customized reports in Tableau for clients. These POC reports highlighted key metrics to help assess firm wide model risk. As a result was given complete ownership of reporting and analytics.

Project - Photography & Digital Department Assistant Digital

May 2012- June 2013

Coordinator, New York University - New York, NY

- Educated and assisted faculty, staff, and students with audio/video needs.
 - Troubleshoot and repair hardware issues
 - Contacted vendors for equipment repairs and purchases.
 - Awarded "**Most Enthusiastic Employee**" award
-
